Powder Technology 87 (1996) 277–279

POWDER TECHNOLOGY

Subject Index of Volume 87

Acoustic shot noise
particle granular temperature in gas fluidized beds, 211
Activation
mechanochemical activation of calcium oxide powder, 249
Agglomeration
modelling of agglomerating systems: from spheres to fractals, 29
Arithmetical mean based on particle number
numerical simulation and verification of a gas–solid jet fluidized bed, 73

Bed expansion
bed expansion and average bubble rise velocity in a gas–solid fluidized bed, 255
Beta distribution
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
Boiler
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Boolean model
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Bridge strength
forces generated in solidifying liquid bridges between two small particles, 175
Bubble average velocity
bed expansion and average bubble rise velocity in a gas–solid fluidized bed, 255
Bubbles
kinematic model of bubble motion in a flotation froth, 3

Cake filtration
the surface structure of cake formed by uniform-sized rigid spheroids in cake filtration, 161
Calcination temperature
texture properties of yttrium oxides generated from different inorganic precursors, 87
Calcium oxide
mechanochemical activation of calcium oxide powder, 249
Circulating
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Circulating beds
hydrodynamics of a circulating fluidized bed operated with different secondary air injection devices, 185
Classification
a classification and design method for moving bed flow in pipes, 49
Clay minerals
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67
Coal logs
wall friction and lubrication during compaction of coal logs, 259

Cold-flow circulating fluidized beds
measurements of solids concentration and axial solids velocity in gas–solid two-phase flows, 127
Combustion
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Compaction force
wall friction and lubrication during compaction of coal logs, 259
Contact mechanics
modelling of agglomerating systems: from spheres to fractals, 29
Convergent two-dimensional channel
deposition of particles in a convergent channel, 83
Core–annulus structure
measurements of solids concentration and axial solids velocity in gas–solid two-phase flows, 127
Cyclone separator
cyclone separator scaling revisited, 93

Design method
a classification and design method for moving bed flow in pipes, 49
Drying modeling
hybrid-neural modeling for particulate solid drying processes, 153
Dynamic simulation
process modelling tools and their application to particulate processes, 13

Effective drag coefficient
a pseudo-Stokes representation of the effective drag coefficient for large particles entrained in a turbulent airstream, 169
Energy minimization
fluidization regimes, 193

Ferromagnetic powders
fluidization of ferromagnetic particles in a magnetic field. Part 1: The effect of field line orientation on bed stability, 59
Field line orientation
fluidization of ferromagnetic particles in a magnetic field. Part 1: The effect of field line orientation on bed stability, 59
Fine size powders
standard reference materials for particle size analysis of ceramic powders by gravity sedimentation, 233
Flotation
kinematic model of bubble motion in a flotation froth, 3
Fluidization regimes
characterization of gas fluidization regimes using pressure fluctuations, 105
Fluidized beds
characterization of gas fluidization regimes using pressure fluctuations, 105
estimation of bubble parameters from differential pressure measurements in gas–fluidized beds, 112
hybrid-neural modeling for particulate solid drying processes, 153
fluidization regimes, 193

Elsevier Science S.A.

effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Fractal dimensions
modelling of agglomerating systems: from spheres to fractals, 29
Friction
theoretical and experimental study of the transport of granular materials by inclined vibratory conveyors, 203
Froth
kinematic model of bubble motion in a flotation froth, 3

Gas fluidized beds
fluidization of ferromagnetic particles in a magnetic field. Part 1: The effect of field line orientation on bed stability, 59
particle granular temperature in gas fluidized beds, 211
Gas–solid fluidized bed
bed expansion and average bubble rise velocity in a gas–solid fluidized bed, 255
Gas–solid two-phase flow
measurements of solids concentration and axial solids velocity in gas–solid two-phase flows, 127
Geldart classification
particle granular temperature in gas fluidized beds, 211
Granular material
theoretical and experimental study of the transport of granular materials by inclined vibratory conveyors, 203
Gravitational sedimentation method
standard reference materials for particle size analysis of ceramic powders by gravity sedimentation, 233
Grinding
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67
Gypsum
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67

Heat transfer
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Hemihydrated gypsum
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67
Hydrocyclones
prediction of high solids concentration regions within a hydrocyclone, 43

Image analysis
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Interparticle forces
forces generated in solidifying liquid bridges between two small particles, 175

Jet penetration height
numerical simulation and verification of a gas–solid jet fluidized bed, 73

Kinematic model
kinematic model of bubble motion in a flotation froth, 3
Kinetic energy
particle granular temperature in gas fluidized beds, 211

Laminar flow
deposition of particles in a convergent channel, 83
Liquid bridge
modelling of agglomerating systems: from spheres to fractals, 29
Lubrication
wall friction and lubrication during compaction of coal logs, 259

Magnetic field
fluidization of ferromagnetic particles in a magnetic field. Part 1: The effect of field line orientation on bed stability, 59
Mathematical models
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
Mechanochemical effect
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67
Mechanochemistry
mechanochemical activation of calcium oxide powder, 249
Microporosity
texture properties of yttrium oxides generated from different inorganic precursors, 87
Microstructures
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Mineral processing
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Mixing
development of slurry mixing models using resistance tomography, 21
hydrodynamics of a circulating fluidized bed operated with different secondary air injection devices, 185
Moving bed flows
a classification and design method for moving bed flow in pipes, 49
Multiscale interactions
fluidization regimes, 193

Neural networks
hybrid-neural modeling for particulate solid drying processes, 153
Non-Newtonian
prediction of high solids concentration regions within a hydrocyclone, 43

Particle deposition
deposition of particles in a convergent channel, 83
Particle diameter
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Particle dynamics
the surface structure of cake formed by uniform-sized rigid spheroids in cake filtration, 161
particle granular temperature in gas fluidized beds, 211
Particle granular temperature
particle granular temperature in gas fluidized beds, 211
Particle packing
the surface structure of cake formed by uniform-sized rigid spheroids in cake filtration, 161
Particle size
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Particle size distribution
standard reference materials for particle size analysis of ceramic powders by gravity sedimentation, 233
Particle trajectory
deposition of particles in a convergent channel, 83
Particulate processes
process modelling tools and their application to particulate processes, 13
Pneumatic transport
a pseudo-Stokes representation of the effective drag coefficient for large particles entrained in a turbulent airstream, 169

Poisson polyhedra
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Population balance
modelling of agglomerating systems: from spheres to fractals, 29
Pore structure
texture properties of yttrium oxides generated from different inorganic precursors, 87
Porosity variations
a classification and design method for moving bed flow in pipes, 49
Pressure fluctuation
characterization of gas fluidization regimes using pressure fluctuations, 105
Process modelling
process modelling tools and their application to particulate processes, 13

Random uniform isotropic fragmentation
stereological estimates of liberation from mineral section measurements: a rederivation of Barbery's formulae with extensions, 141
Regime
fluidization regimes, 193
Resistivity
development of slurry mixing models using resistance tomography, 21
Rosin–Rammler distribution
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
Rotary dryers
hybrid-neural modeling for particulate solid drying processes, 153

Scaling
cyclone separator scaling revisited, 93
Secondary air
hydrodynamics of a circulating fluidized bed operated with different secondary air injection devices, 185
Similarity
cyclone separator scaling revisited, 93
Simulation
prediction of high solids concentration regions within a hydrocyclone, 43
Size enlargement
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
Size reduction
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181
Solid bridges
forces generated in solidifying liquid bridges between two small particles, 175
Solids concentration
measurements of solids concentration and axial solids velocity in gas–solid two-phase flows, 127
Solids holdup
characterization of gas fluidization regimes using pressure fluctuations, 105
Solids residence times
a pseudo-Stokes representation of the effective drag coefficient for large particles entrained in a turbulent airstream, 169
Solids velocity
measurements of solids concentration and axial solids velocity in gas–solid two-phase flows, 127
Specific area variations
a classification and design method for moving bed flow in pipes, 49
Spheroid
the surface structure of cake formed by uniform-sized rigid spheroids in cake filtration, 161
Standard reference materials
standard reference materials for particle size analysis of ceramic powders by gravity sedimentation, 233
Surface properties
texture properties of yttrium oxides generated from different inorganic precursors, 87
Suspensions
development of slurry mixing models using resistance tomography, 21

Talc
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67
Terminal velocity
effects of bed particle size on heat transfer in circulating fluidized bed boilers, 239
Texture properties
texture properties of yttrium oxides generated from different inorganic precursors, 87
Tomography
development of slurry mixing models using resistance tomography, 21
prediction of high solids concentration regions within a hydrocyclone, 43
Turbulent airstream
a pseudo-Stokes representation of the effective drag coefficient for large particles entrained in a turbulent airstream, 169
Two-phase model
numerical simulation and verification of a gas–solid jet fluidized bed, 73

Vibratory conveyor
theoretical and experimental study of the transport of granular materials by inclined vibratory conveyors, 203

Wall friction
wall friction and lubrication during compaction of coal logs, 259
Weibull distribution
determination of the parameters of the Rosin–Rammler and beta distributions from their mode and variance using equation-solving software, 181

X-ray diffraction
mechanochemical changes in gypsum when dry ground with hydrated minerals, 67

Yield strength
forces generated in solidifying liquid bridges between two small particles, 175
Yttrium oxides
texture properties of yttrium oxides generated from different inorganic precursors, 87
